Bulletin No. 123.

IRON CLAD ELECTRIC SIGNS (PATENTED) PORCELAIN FACED LETTER, INTERCHANGEABLE TYPE

Definition.

By the use of the words "Iron Clad" to define our new form of electric sign we mean to lay stress on the fact that the sign is "clothed in iron," and that it is strong and that there is no wood nor any inflammable material in its construction.

Frame.

A frame of heavy galvanized iron is made, substantially strengthened on the inside by angle iron and corner braces to insure absolute rigidity.

Letter Plates.

The interchangeable porcelain enameled steel letter plates are securely attached to this galvanized frame by specially designed patented clamps.

Each letter plate has on it a letter, numeral or character. The receptacles which hold the lamps are arranged to the best possible advantage so that the letters are clearly defined. The sign is perfectly plain and easily read by night or day. The receptacles used are of our own design and are particularly adapted for this style of sign construction. The letter plates are equipped with receptacles wired, and are ready to install upon the sign frame.

IRON CLAD ELECTRIC SIGN FRAMES

Net price.....

Attention is called to the cut herein shown of the sign reading SMITH'S. Please observe the difference in width of the letter plate "M" and the letter plate "I." We give the greatest care to the

spacings of the letters and our customer is assured that with an equipment of our letter plates and spacings a perfectly clear and readable sign can be obtained.

We are manufacturers of all kinds of electric signs and transparencies and we solicit your inquiries.

Have you our bulletins on our line of flashers? We make flashing machines to produce any flashing effect.
